

Cannabis Leaf Tissue Testing Submission Form

(Results Will Show Amount of Each Essential Mineral Nutrient in PPM)

Leaf tissue analysis submissions require about 15 to 20 fully formed leaves taken near the top of the plant. The analysis will evaluate all essential minerals and 13 trace elements (heavy metals) in the leaves.

Procedure for packing samples:

1. Place leaves in a ziplock baggie (or something similar) with a folded up dry paper towel to absorb moisture during shipping.

2. Label the baggies with your sample name, which should include an abbreviated strain/cultivar name, stage of growth, pH and EC (or ppm) of the media (recent runoff readings) at the time of cutting the leaves.

Example: DP F20 6.0/2.2

This stands for Durban Poison, Flower Day 20, 6.0pH, 2.2EC

3. Place your sample baggies inside a turkey bag to contain smell, remove the excess air, seal the turkey bag, and place it inside an opaque shipping box. Inside the box, include this submission form with a check made payable to **CULTIVATION SECTOR CONSULTING**. Each sample costs \$115 to test.

If paying by check or money order is not feasible, you may also pay online via PayPal at our website by visiting **CannabisCultivationConsulting.com/labtestpay** and enter your payment Transaction ID on this form (below) so we can match up your payment with your sample/s.

It is best to ship tissue samples at the beginning of the week, just after they are cut from the plant to ensure the quality of the sample is retained. Use either USPS Express or Priority Mail. You should receive your results within 3 days after they have arrived at the lab. Results will be delivered by phone and email.

Do NOT include any flower material in your submission. Due to the THC content of flower material, shipping it is illegal and doing so will result in rejection of the sample and refusal of future services.

Ship samples to: Cultivation Sector Consulting
365 Coral Circle
El Segundo, CA 90245
